

Medical Quiz

Saeed Alhindi, MD, CABS, FRCSI*

A ten-year-old male boy is a known case of sickle cell disease presented to accident and emergency room with history of abdominal pain, compressing in nature, associated with vomiting for three weeks. Physical examination revealed a palpable mass in the upper mid-abdomen. Serum and urinary amylase was five times higher than normal value. The patient had the following radiological test.

Please answer the following questions:

- Q.1.** What is the radiological test and describe the abnormal findings?
- Q.2.** What is the diagnosis?
- Q.3.** Mention another diagnostic radiological test in this case.
