

Medical Quiz

Nasir Muwfaq Younis, Ph.D*

A 15-year-old female appears with a lump on her right leg and no notable medical history. It began as a little pink "pimple" about two years ago. It was discovered that it had grown larger a few days ago. It's a little itchy, but it's never been painful or bled. There had been no previous trauma. On her right popliteal fossa, a pinkish red exophytic nodule with a diameter of 1.2 cm, a height of 0.8 cm, and a 1-mm central crust was discovered.

Figure 1

Q1: What's your diagnosis?

Q2: What is the most common cause of this "pimple"?

Q3: What is this disease?
