

## **Tinea Capitis Caused by Trichophyton Rubrum**

Haitham Al-Qari, MD\* Adarsh Vijay Mudgil, MD\*\* Khalid Al-Ghaithi, MD\*\* Frederick A  
Pereira, MD\*\* Maryam Alderazi, MD\*\*\*

**We present a case of tinea capitis in a four-week-old infant caused by *Trichophyton rubrum*; the patient was effectively treated with griseofulvin ultramicronized. Although tinea capitis is the most common fungal infection in children, it is rarely seen in immunocompetent infants. Tinea capitis involves infection of both the hair shaft and pilosebaceous unit, thus mandating treatment with systemic antifungal therapy.**
