

### **Marchiafava-Bignami Disease**

Fahd Al-Khamis, MBBS, UODFN\* Fozaih Al-Shamrani, MBBS, UODFN\*\* Ibrahim Al-Ghanimi, MBBS, UODFN\*\*\* Sarah Abdulhafiz, MD\*\*\*\* Hanan Baradwan, MBBS\*\*\*\*\*

**Marchiafava-Bignami Disease (MBD) is considered to be a rare and severe complication of chronic alcohol abusers; atrophy and necrosis of the corpus callosum is the hallmark of the disease.**

**We report a 32-year-old female who presented with headache and diplopia. A brain MRI showed high signal intensity in the splenium of the corpus callosum. This case supports the occurrence of MBD in non-alcoholic patients.**
